

What is mathematics about? And if it is about some sort of mathematical reality, how can we have access to it? This is the problem raised by Plato, and it is still today the subject of lively philosophical disputes. This book traces the history of the problem, from its origins to its contemporary treatment. It discusses the answers given by Aristotle, Proclus and Kant, through Frege's and Russell's versions of logicism, Hilbert's formalism, Gödel's platonism, up to the current debate on Benacerraf's dilemma and the indispensability argument. Through the considerations of themes in the philosophy of language, ontology, and the philosophy of science, the book aims at offering an historically informed introduction to the philosophy of mathematics, approached through the lenses of its most fundamental problem.

**Marco Panza** is Research Professor at the CNRS (IHPST), Paris, France. He is the author and editor of several books and papers in the domains of history and the philosophy of mathematics, including *Analysis and Synthesis in Mathematics* (co-edited with M. Otte), *Isaac Newton, Newton et l'origine de l'analyse, 1664–1666*, and *Nombres: Éléments de mathématiques pour philosophes*.

**Andrea Sereni** is Lecturer at San Raffaele University, Milan, Italy. He obtained his PhD at Bologna University and has been a visiting scholar at the Arché Centre at the University of St Andrews, Scotland, UK. He has taught courses at the Universities of Modena and Reggio Emilia, Parma, and Bologna. His teaching, research interests and publications cover the philosophy of mathematics, epistemology, and the philosophy of language.

Both authors are members of the COGITO Research Centre based at the University of Bologna, Italy.
